

## Free Caregiver Education Understanding Alzheimer's And Dementia

Alzheimer's disease is not a normal part of aging, but a disease of the brain that causes problems with memory, thinking & behavior. Join our trained volunteer community educator, Maegan Wenberg, Care Coordinator for Comfort Keepers, as she provides information on the impact of Alzheimer's, the difference between it and dementia, stages & risk factors, some research & treatments available to help with some symptoms, resources and more.

Caregiver Education is designed to provide caregivers with knowledge and practical skills to better meet the challenges of caring for a loved one. Check back for future topics.
